# 1. Introduction

After we acquired parts of ABN AMRO BANK N.V. (ABN AMRO) in April 2010, you became a client of Deutsche Bank Nederland N.V. (Deutsche Bank). Since then, you have continued to use products and services provided by ABN AMRO. This will begin to change over the coming months as Deutsche Bank starts the process of introducing its own products and services to the Dutch market, so that you can benefit from our manner of doing business. The transition to Deutsche Bank will be completed by the start of Q4 2012. Once your banking records and data have been migrated, Deutsche Bank will manage all your transactions.

## [Deutsche Bank internet banking implementation](#)

You will receive separate notification of the exact date planned for the data migration. Following the data migration, you will enjoy online access to your accounts through Deutsche Bank internet banking. ABN AMRO Internet Banking and ABN AMRO Access Online will no longer be accessible to Deutsche Bank clients from that date. The applications for internet banking used by Deutsche Bank and ABN AMRO differ in a number of respects, and this has consequences for processing your electronic account information in your administration.

## [Deutsche Bank format specifications for specialists](#)

It is important to be aware of the Deutsche Bank format specifications if you use the MT940/942 format for processing your electronic account information. This document outlines the Deutsche Bank MT940/942 formats and the differences in comparison with the ABN AMRO setup. These differences may affect the manner in which files are processed in your administration.

This information is intended for departments that use electronic account information, IT specialists and software suppliers.

## [Differences regarding MT940/942](#)

An MT940/942 Customer Statement Message is a standard message containing electronic account information relating to the Society for Worldwide Interbank Financial Telecommunication (SWIFT). In the following sections you will find guidelines explaining how to process the Deutsche Bank MT940/942 format in your administrative systems. The format differences do not relate to the technical structure of MT940/942. This continues to conform to the format description specified by SWIFT. The differences relate to the logical content of MT940/942.

## 3. MT940 Differences per tag

In this chapter the specific usage of the SWIFT MT940 by Deutsche Bank versus ABN AMRO is outlined per tag.

### 3.1 Tag 20 Transaction Reference Number

This field specifies the reference assigned by the sender to unambiguously identify the message.

:20:			
M			
Field	SWIFT-notation	Current ABN AMRO	New Deutsche Bank
Transaction Reference Number (TRN)	Form: 16x	Form: 16x	Form: 16x s000000000nnnnnn
		Internet Bankieren default value: ABN AMRO BANK NV	
		:20: ABN AMRO BANK NV	
		<i>Example:</i> :20: 0000000030210056	:20:s000000000587017

### 3.2 Tag 25 Account Identification

This field identifies the account for which the statement is sent.

:25:			
M			
Field	SWIFT-notation	Current ABN AMRO	New Deutsche Bank
Account Identification	Form: 35x	Form: 9n   10n	Form: 16!x3!a
		9n: account number without leading zero 10n: account number with leading zero	16!x: IBAN 3!a: ISO currency code
		Usage of the leading zero depends on the client. An account number can only be held in a single currency (ISO-code)	An account number can only be held in a single currency (ISO-code)
		<i>Remark:</i> in a single currency (ISO-code)	
		<i>Example:</i> :25:0123456789	:25:NL08DEUT0319809633EUR

### 3.3 Tag 28C Statement Number/Sequence Number

This field contains the sequential number of the statement, optionally followed by the sequence number of the message within that statement when more than one message is sent for one statement.

:28C:			
M			
Field	SWIFT-notation	Current ABN AMRO	New Deutsche Bank
Statement Number / Sequence Number	Form: 5n[/5n]	Form: n3/n5	Form: 5n[/5n]
		n3: Statement number n5: Sequence number	
		The statement number contains the actual number of the day in the year (1 until 366). The sequence number starts with value 1 and is incremented by 1 per submessage.	The first MT940 after migration starts with a statement number equal to the day number. In each new MT940 the statement number will be incremented by 1.
		<i>Remark:</i>	
		:28C:3/00001	
		<i>Example:</i> :28C:355/00001	:28C:5/1
